It is a plant of the family amaranthaceae and it can grow from 30cm to 60cm

More information:

https://www.amu.bio/_globe_amaranth_2

Cultivation

Easy to grow in sandy, well-drained soil with good sun exposure.

History

It is an endemic plant of Madeira and lives by the sea.

In the old days, it was used in churches as an ornamental plant, as it maintains its beauty for a long time.

Utilization

The infusion is used to treat colds and there are still those who use the leaves and flowers of this plant to wash the skin.
