## Cultivation

Likes airy soil, with sun exposure and rich in organic matter.

It is easily multiplied by seed at any time of the year.

It should be watered daily in the hottest season and in the winter whenever the soil is dry.

## History

In the old days, it was widely used in churches as an ornamental plant, as it maintains its beauty for a long time.

## Utilization

In medicine, it is often used to relieve cough and hoarseness.

Due to its beauty and durability it is very common to see it in floral arrangements.
